Summary

B.Tech Information Technology graduate and aspiring UI/UX Designer with a strong foundation in front-end development and user-centered design principles. Skilled in translating user needs into intuitive, visually engaging interfaces through wireframing, prototyping, and usability-focused thinking, backed by hands-on project experience building real interfaces end-to-end. Passionate about solving real-world problems through thoughtful, accessible design. Quick learner with strong adaptability, communication, and collaboration skills. Eager to contribute, learn, and grow in a dynamic design team.

Skills

Design Tools: Figma, Adobe XD, Canva, Photoshop

Design Skills: Wireframing, Prototyping, User Research, Usability Testing, Responsive Design, Design Systems, User Flows

Front-End & Dev Tools: HTML, CSS, JavaScript, React.js, REST APIs, Git

Interests: User-Centered Design, Interaction Design, Human-Computer Interaction, Visual Design

Internship Experience

Web Development & UI Intern – ennoViQ Educator & DLQ Technologies

Oct 2023 – Dec 2024

Gained hands-on experience building user interfaces for web applications, focusing on responsive layouts, visual consistency, and usability across screen sizes. Collaborated with the team to translate design requirements into functional interfaces, and participated in debugging and testing to refine the user experience. Developed a solid understanding of how front-end design decisions connect to back-end functionality and data structure, giving a full picture of the product design-to-development pipeline.

Projects

Blockchain-Based Smart City Complaint System

Tools: Figma (UI), React.js, Node.js, MongoDB, Blockchain

- Designed and built the **user interface for a decentralized complaint management system**, focusing on a simple, low-friction submission flow so citizens could report city complaints and track status in real time.
- Mapped out **role-based user flows** for citizens and administrators, designing separate dashboard views tailored to each user's goals — registration and tracking for citizens, review and resolution for admins.
- Paired the interface with blockchain smart contracts on the backend to ensure data integrity, reinforcing user trust in the system without adding complexity to the front-end experience.

Knee Osteoarthritis Prediction System

Tech: Python, Deep Learning, CNN, Image Processing

- Built a **deep learning-based prediction system** using CNN architectures to classify knee osteoarthritis severity from X-ray images, designed to present results in a clear, non-technical way for early diagnosis support.
- Implemented an end-to-end pipeline including **image preprocessing, feature extraction, and model training**, keeping the eventual output interpretable for both clinicians and patients.
- Evaluated the CNN model on accuracy, precision, and recall, strengthening an eye for how underlying data quality and structure shapes the reliability of a user-facing result.

Education

Velammal Engineering College

Nov 2022 – 2026

B.Tech in Information Technology | CGPA : 7.99

Sri Vaiyapuri Vidyalaya Matric Higher Secondary School

Higher Secondary Certificate (HSC) | Percentage:86.6%

2022

Secondary School Leaving Certificate (SSLC) |Percentage:82%

2020

Certifications

- Google AI Certification** – Completed the Google AI certification program, gaining expertise in machine learning concepts, AI applications, and model fundamentals.
- C & C++ Programming Certification** – Earned certification demonstrating proficiency in C and C++ programming, data structures, algorithms, and problem-solving skills.

Participations

- Solved **200+ coding problems** on LeetCode, strengthening algorithmic thinking and data structures.
